# TBE IgG/IgM ELISA for serum and CSF

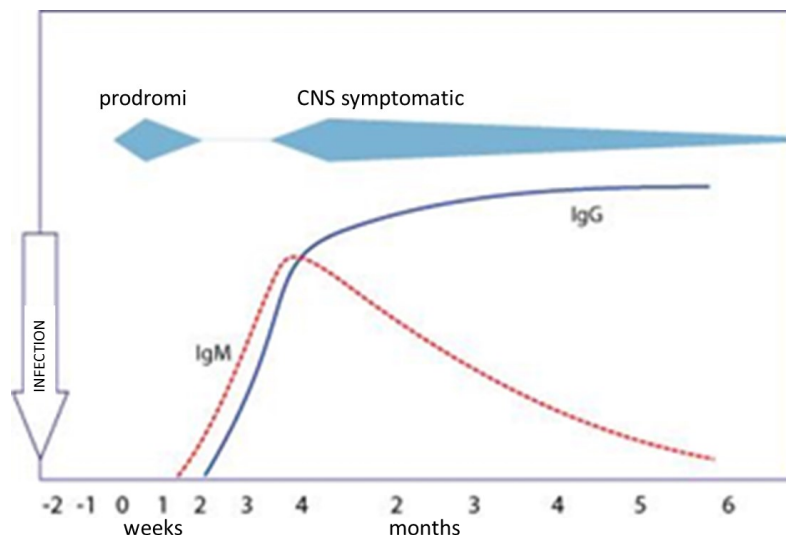

## Indication for antibody determination by ELISA

The TBE ELISA is intended for the detection of an acute or recent infection with Tick-Borne-Encephalitis-Virus (TBE) or for the detection of vaccination antibodies.

- ▼ Detection of **seroconversion** after vaccination
- ▼ Detecting an apparent or non-apparent infection with the TBE virus
- ▼ **Antibodies monitoring** after infection
- ▼ **Differential diagnosis** to other **CNS** diseases
- ▼ **Differential diagnosis** to **Lyme disease** after tick bite
- ▼ Antibody detection in **CSF**

## Serological course of a TBE-infection\*

Order No.:

**IgG / IgM Test kit**

**EC117.00**

**IgG/IgM CSF Standards**

**EC117L60 / EC117L80**

**IgG Antibody-Index-Control**

**EN117L65**
